

## Tell Us Your Story

When I first arrived at Seneca Physical Therapy I could barely get around due to knee problems, a metatarsal fasciitis/Achilles tendon, causing a lot of pain on walking; also I was diagnosed with sclerosis of the lower vertebrae. A right shoulder bursitis developed later. Matt and Barbie understood all the problems and went to work immediately, explaining each step of the therapy along the way. They have always been so patient, so very pleasant, and so empathetic — absolutely wonderful in every way. I looked forward to my visits and I am finishing up very much improved. Except for the shoulder (which is greatly improved — a rotator cuff tear is to be ruled out), my symptoms have just about gone and I am functioning so very much better. My entire experience here has been so very pleasant. The entire staff has been very helpful and very kind. My heartfelt "Thanks" to everyone.
